

Warehouse Management System

The ESI-WMS suite is a modular solution for managing internal warehouse logistics processes.

The operator interfaces are designed for the management of raw material, component and finished product warehouses, guaranteeing a high degree of customization to meet the needs of various sectors (Pharmaceutical, Fashion, Food, Chemical, Furniture, Manufacturing).

Our experience in the field has enabled us to develop a standard protocol for interfacing with the main field devices and handling systems, managed by the main brands (Siemens, Omron, Rockwell, Phoenix, Wago, ecc.).

MASTER DATA MANAGEMENT (MDM)

Module for WMS configuration and master data

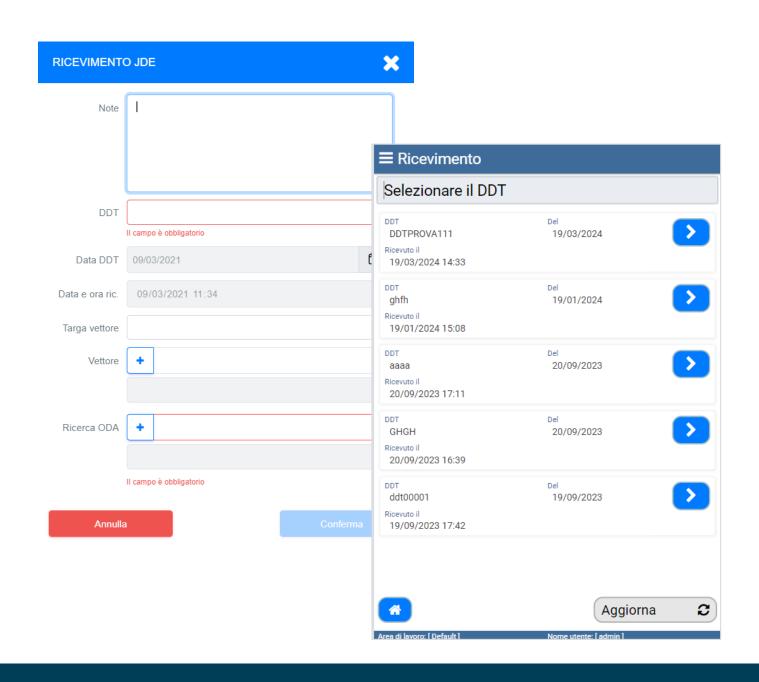

Through the MDM it is possible to configure all the entities to be managed by the system.

- Establishment master data
- Department master file
- Line master data
- Quality status
- Locations
- Devices
- Printers
- Storage rules

- Underlay levels
- Label layout
- Cold chain parameters
- Alarms
- From ERP:
 - Supplier/customer master data
 - Articles
 - Product groups/subgroups
 - Rotation classes
 - > BOM

RECEVING MANAGER

Incoming goods management module

When good enter in the warehouse, the WMS system allows to you:

- **Identify the items** by reading the barcode or RFID tag affixed to the pallet;
 - ➤ If goods don't have one, the WMS creates a new identification code and prints the label to be affixed to the goods.
- Link the goods with the relevant purchase order and delivery note;
- Make quality and quantity checks;
- Load the warehouse (physically and accounting);
- Manage any **returns** from customers/supplier.

STOCK MANAGER

Storage rule management module

ESI-WMS supports the storage phase by managing appropriate storage rules.

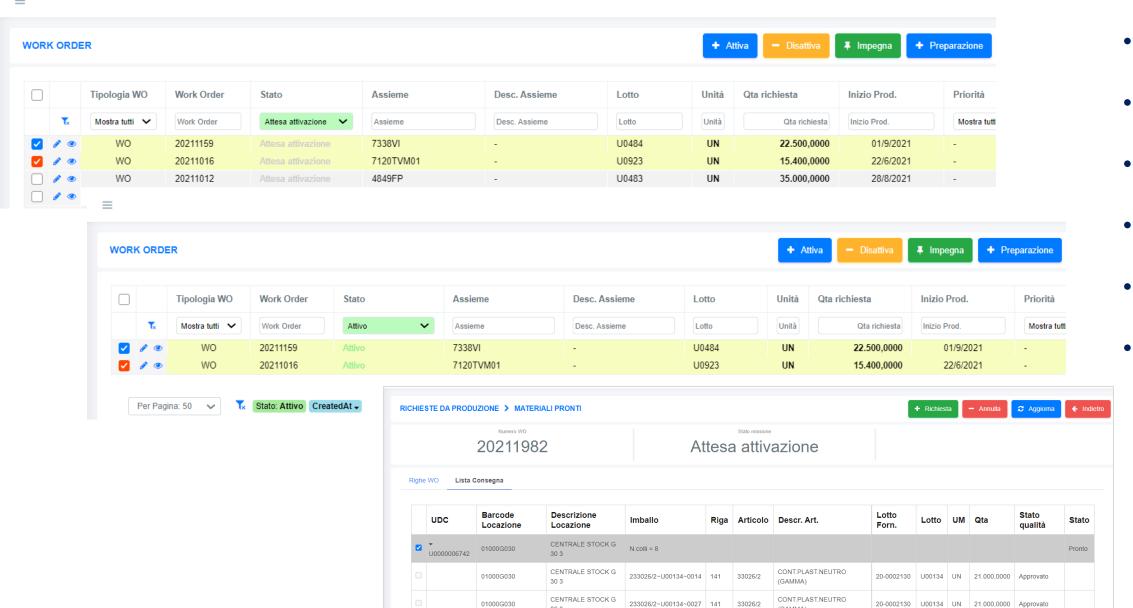

Feature:

- Goods storage rules
- Sub-stock management
- Quarantine management
- Samples and references management

ORDER MANAGER

Module to manage transfer orders

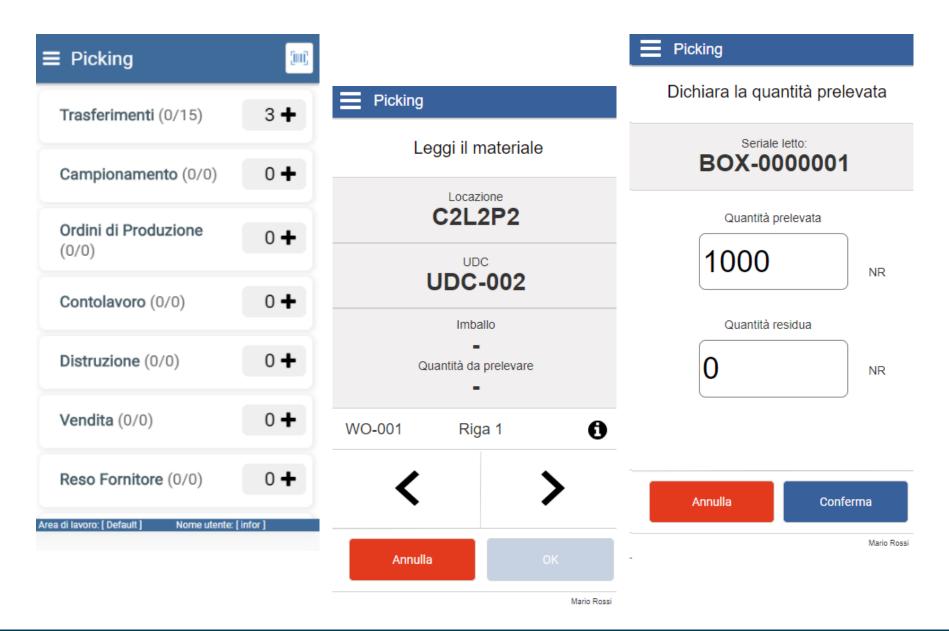

Features:

- Manual order creation
- Automatic, scheduled, manual activation
- User assignment
- Priority management and grouping rules
- Order management (FIFO, LIFO, FEFO logics)
- Integration with vertical warehouses

PICKING MANAGER

Module to manage picking activities

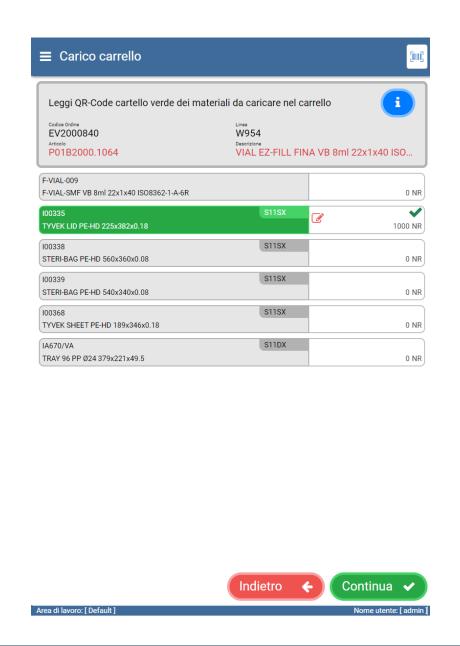

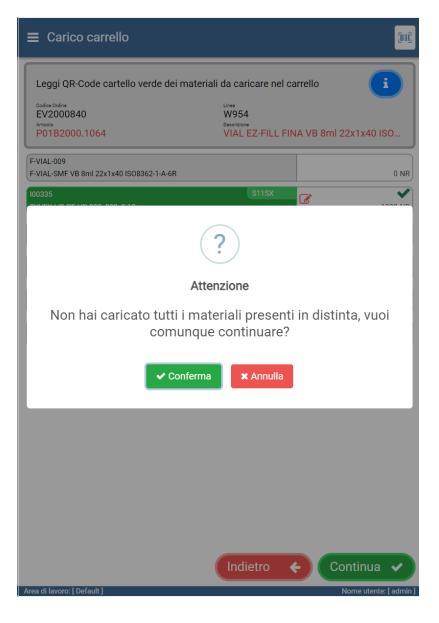

Features:

- Suggest pick-up location, item and quantity to be picked up
- Withdrawal item/material/LU
- Supporting the kitting phase (based on BOM)
- List of LU ready for delivery
- LU recall by production (Kanban)
- Errors management

MIX UP MANAGER

Module for production framing control

Features:

- Material compatibility check with the current order BOM
- Batch block
- Alarms management
- Dashboard

Technologies used:

- Scanner barcode
- RFID

SHIPPING MANAGER

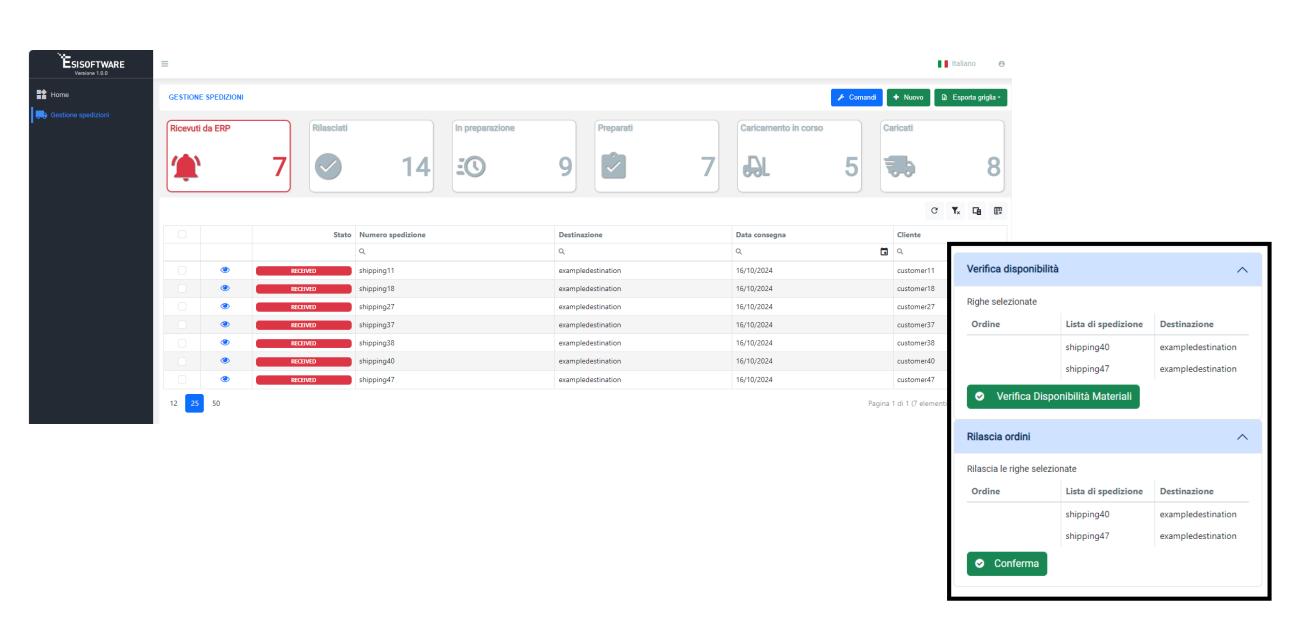

Module for the management of shipping orders to end customers

Features:

- Creation of shipping list
- Packing list generation
- Reading parcels set up in the bay
- Unexpected material checks
- Automatic order closure

Technologies used:

- Barcode reader
- RFID gates on loading bays

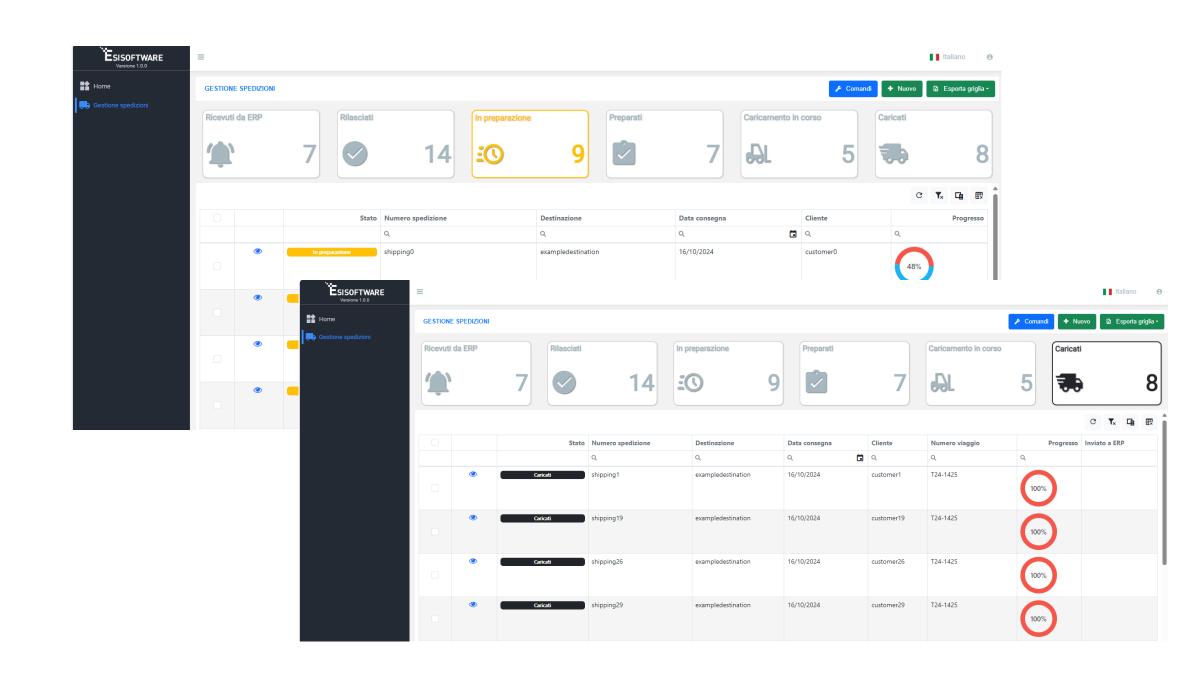

SHIPPING MANAGER

Shipment management funnel

- Creating/receiving dispatch missions
- Releasing shipments
- Preparation (grounding)
- LU prepared
- LU loading in progress
- LU loaded

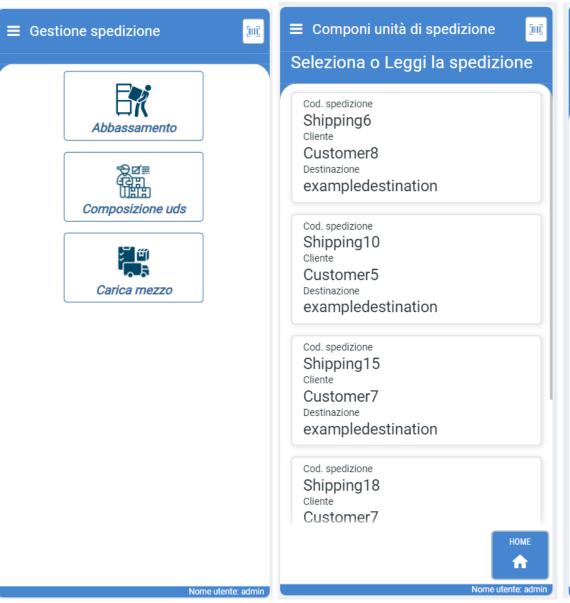

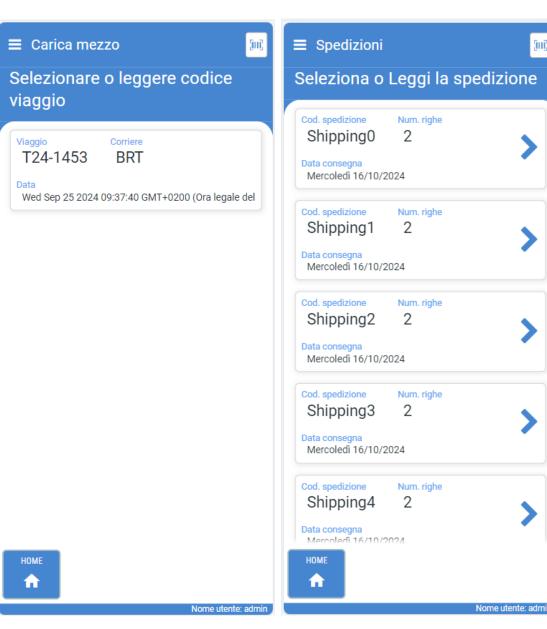

SHIPPING MANAGER

Mobile

REPORT

Advanced reporting module

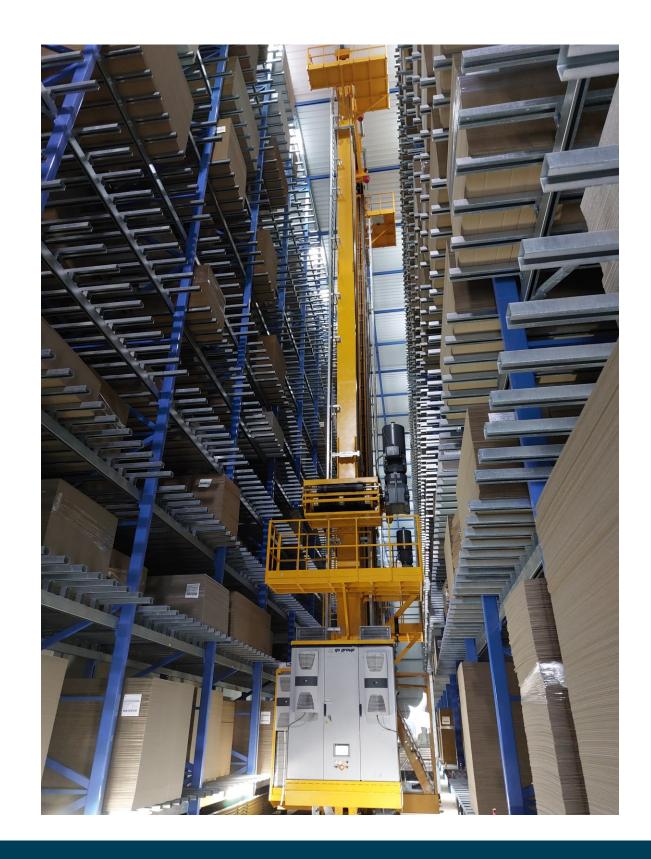

AUTOMATION MANAGER

Module for integration with field devices

Features:

- Check conditions for received **unloading** requests
- Check conditions for received **load** requests
- Exchange messages with **PLC**
- Integration with **AGV**, LGV, AMR

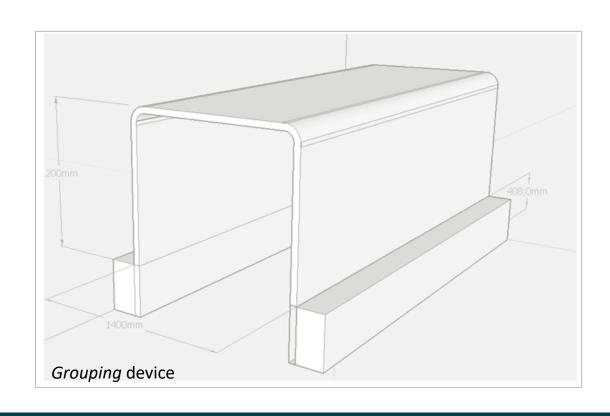

RFID MANAGER

Module enabling automatic tracking of material movements in the warehouse

Features:

- RFID label and printer management
- RFID Data collector
- RFID Supervisor

Tipologia di impianti:

- RFID gates
- RFID tunnel
- Grouping device
- Hoods

RFID MANAGER

Real Time tracking

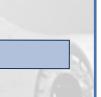

POC EXECUTION

DEFINITION OF ENVIRONMENTAL PARAMETERS

TAG TYPE SELECTION

ANTENNA AND READER TYPE SELECTION

ON-SITE INSTALLATION AND INTEGRATION WITH LEGACY SYSTEMS

ELECTRICAL AND MECHANICAL DESIGN

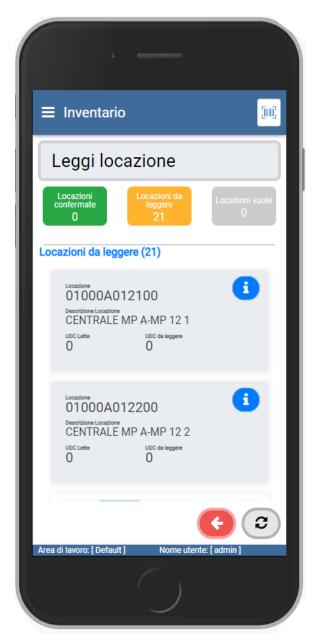

RFID GATE

INVENTORY

Module to perform stock inventory

WORKING MODALITY:

Autoconfirm

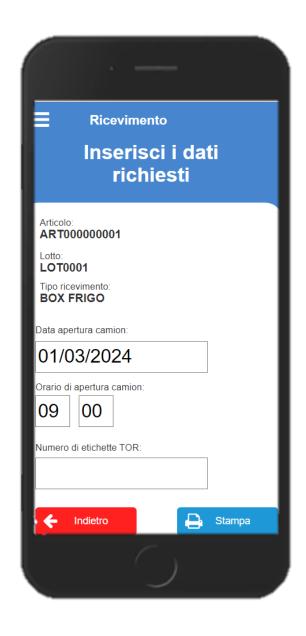

Reading the LU code automatically confirms the contents of the pallet.

Manual

The system requires both the reading of the barcode and the manual confirmation of the materials present (barcode reading of materials optional or required).

TOR (Time Out of Refrigeration)

Module for product control in refrigerated areas

Features:

- Tracking entry-exit refrigerated area
- Counting TOR (*Time Out of Refrigeration*)
- Counting TIR (*Time In Refrigeration*)
- Counting TOF (Time Out of Freezer)
- Allarms management
- Reporting
